Platform Runbook - Incident Response

1. Severity Levels

SEV1 - Complete outage or data loss. Page the on-call lead immediately. Target acknowledgement: 5 minutes. Status page update: 15 minutes.
SEV2 - Major degradation affecting many customers. Acknowledge in 15 minutes. Status page update within 30 minutes.
SEV3 - Minor degradation or a single-customer issue. Handle during business hours. No status page update required.

2. Escalation

The primary on-call engineer owns the incident until it is resolved or formally handed over. If the primary does not acknowledge a SEV1 page within 10 minutes, PagerDuty automatically escalates to the secondary, and after a further 10 minutes to the engineering manager.

3. Rollback Procedure

Deployments are rolled back with: orbctl release rollback --env prod --to-previous. A rollback takes about 4 minutes to propagate across all regions. Database migrations are NOT reversed by a rollback and must be reverted separately using the down migration.

Always post the rollback in #incidents before running it.

Platform Runbook - Service Ownership

4. Service Registry

Each service has a numeric identifier used in dashboards and alerts.

ID 1 - payments-api Owner: Priya Raman Tier: 1
On-call rota: payments-primary. SLO: 99.95% availability.

ID 2 - ledger-worker Owner: Marcus Webb Tier: 1
On-call rota: payments-primary. SLO: 99.9% availability.

ID 3 - notification-svc Owner: Aisha Khan Tier: 2
On-call rota: platform-secondary. SLO: 99.5% availability.

ID 4 - reporting-batch Owner: Tom Iverson Tier: 3
On-call rota: none (business hours only). No availability SLO.

Tier 1 services require a two-person review for any production change.
Tier 3 services may be deployed by a single engineer.

5. Maintenance Windows

Planned maintenance runs Sundays 02:00-04:00 UTC. Tier 1 services require 14 days notice to customers; Tier 2 and 3 require 3 days notice.
